

GCSE (9-1)

Specification

GATEWAY SCIENCE CHEMISTRY A

J248

For first assessment in 2018

Disclaimer

Specifications are updated over time. Whilst every effort is made to check all documents, there may be contradictions between published resources and the specification, therefore please use the information on the latest specification at all times. Where changes are made to specifications these will be indicated within the document, there will be a new version number indicated, and a summary of the changes. If you do notice a discrepancy between the specification and a resource please contact us at: resources.feedback@ocr.org.uk

We will inform centres about changes to specifications. We will also publish changes on our website. The latest version of our specifications will always be those on our website (ocr.org.uk) and these may differ from printed versions.

Support and Guidance

Introducing a new specification brings challenges for implementation and teaching, but it also opens up new opportunities. Our aim is to help you at every stage. We are working hard with teachers and other experts to bring you a package of practical support, resources and training.

Subject Advisors

OCR Subject Advisors provide information and support to centres including specification and non-exam assessment advice, updates on resource developments and a range of training opportunities.

Our Subject Advisors work with subject communities through a range of networks to ensure the sharing of ideas and expertise supporting teachers and students alike. They work with developers to help produce our specifications and the resources needed to support these qualifications during their development.

You can contact our Chemistry A Subject Advisors for specialist advice, guidance and support:

01223 553998
ScienceGCSE@OCR.org.uk
[@OCR_Science](https://www.instagram.com/OCR_Science)

Teaching and learning resources

Our resources are designed to provide you with a range of teaching activities and suggestions that enable you to select the best activity, approach or context to support your teaching style and your particular students. The resources are a body of

knowledge that will grow throughout the lifetime of the specification, they include:

- Delivery Guides
- Transition Guides
- Topic Exploration Packs
- Lesson Elements.

We also work with a number of leading publishers who publish textbooks and resources for our specifications. For more information on our publishing partners and their resources visit: <https://ocr.org.uk/qualifications/resource-finder/publishing-partners/>

Professional development

Our improved Professional Development Programme fulfils a range of needs through course selection, preparation for teaching, delivery and assessment. Whether you want to come to face-to-face events, look at our new digital training or search for training materials, you can find what you're looking for all in one place at the CPD Hub: cpdhub.ocr.org.uk

An introduction to new specifications

We run training events throughout the academic year that are designed to help prepare you for first teaching and support every stage of your delivery of the new qualifications.

To receive the latest information about the training we offer on GCSE and A Level, please register for email updates at: ocr.org.uk/updates

Assessment Preparation and Analysis Service

Along with subject-specific resources and tools, you'll also have access to a selection of generic resources

that focus on skills development, professional guidance for teachers and results data analysis.

1 Why choose an OCR GCSE (9–1) in Chemistry A (Gateway Science)?

1a. Why choose an OCR qualification?

Choose OCR and you've got the reassurance that you're working with one of the UK's leading exam boards. Our new OCR GCSE (9–1) in Chemistry A (Gateway Science) course has been developed in consultation with teachers, employers and Higher Education (HE) to provide learners with a qualification that's relevant to them and meets their needs.

We're part of the Cambridge Assessment Group, Europe's largest assessment agency and a department of the University of Cambridge. Cambridge Assessment plays a leading role in developing and delivering assessments throughout the world, operating in over 150 countries.

We work with a range of education providers, including schools, colleges, workplaces and other institutions in both the public and private sectors. Over 13 000 centres choose our A Levels, GCSEs and vocational qualifications including Cambridge Nationals and Cambridge Technicals.

Our Specifications

We believe in developing specifications that help you bring the subject to life and inspire your learners to achieve more.

We've created teacher-friendly specifications based on extensive research and engagement with the teaching community. They're designed to be straightforward and accessible so that you can tailor the delivery of the course to suit your needs. We aim to encourage learners to become responsible for their own learning, confident in discussing ideas, innovative and engaged.

We provide a range of support services designed to help you at every stage, from preparation through to the delivery of our specifications. This includes:

- A wide range of high-quality creative resources including:
 - Delivery Guides
 - Transition Guides
 - Topic Exploration Packs
 - Lesson Elements
 - . . . and much more.
- Access to Subject Advisors to support you through the transition and throughout the lifetime of the specification.
- CPD/Training for teachers to introduce the qualifications and prepare you for first teaching.
- Active Results – our free results analysis service to help you review the performance of individual learners or whole schools.
- [ExamBuilder](#) – our free online past papers service that enables you to build your own test papers from past OCR exam questions.

All GCSE (9–1) qualifications offered by OCR are accredited by Ofqual, the Regulator for qualifications offered in England. The accreditation number for OCR's GCSE (9–1) in Chemistry A (Gateway Science) is QN601/8663/X.

1b. Why choose an OCR GCSE (9–1) in Chemistry A (Gateway Science)?

We appreciate that one size doesn't fit all so we offer two suites of qualifications in each science:

Chemistry A (Gateway Science) – Provides a flexible approach to teaching. The specification is divided into topics, each covering different key concepts of chemistry. Teaching of practical skills is integrated with the theoretical topics and they are assessed through the written papers.

Chemistry B (Twenty First Century Science) – Learners study chemistry using a narrative-based approach. Ideas are introduced within relevant and interesting settings which help learners to anchor their conceptual knowledge of the range of topics required at GCSE level. Practical skills are embedded within the specification and learners are expected to carry out practical work in preparation for a written examination that will specifically test these skills.

All of our specifications have been developed with subject and teaching experts. We have worked in

close consultation with teachers and other stakeholders with the aim of including up-to-date relevant content within a framework that is interesting to teach and easy to administer within all centres.

Our new GCSE (9–1) in Chemistry A (Gateway Science) specification builds on our existing popular course. We've based the redevelopment of our GCSE sciences on an understanding of what works well in centres large and small. We've undertaken a significant amount of consultation through our science forums (which include representatives from learned societies, HE, teaching and industry) and through focus groups with teachers.

The content is clear and logically laid out for both existing centres and those new to OCR, with assessment models that are straightforward to administer. We have worked closely with teachers to provide high quality support materials to guide you through the new qualifications.

Aims and learning outcomes

GCSE study in the sciences provides the foundation for understanding the material world. Scientific understanding is changing our lives and is vital to world's future prosperity, and all learners should be taught essential aspects of the knowledge, methods, process and uses of science. They should be helped to appreciate how the complex and diverse phenomena of the natural world can be described in terms of a small number of key ideas relating to the sciences which are both inter-linked, and are of universal application.

These key ideas include:

- the use of conceptual models and theories to make sense of the observed diversity of natural phenomena
- the assumption that every effect has one or more cause
- that change is driven by differences between different objects and systems when they interact
- that many such interactions occur over a distance and over time without direct contact
- that science progresses through a cycle of hypothesis, practical experimentation, observation, theory development and review
- that quantitative analysis is a central element both of many theories and of scientific methods of inquiry.

OCR's GCSE (9–1) in Chemistry A (Gateway Science) will encourage learners to:

- develop scientific knowledge and conceptual understanding of chemistry
- develop understanding of the nature, processes and methods of science, through different types of scientific enquiries that help them to answer scientific questions about the world around them
- develop and learn to apply observational, practical, modelling, enquiry and problem-solving skills, both in the laboratory, in the field and in other learning environments
- develop their ability to evaluate claims based on science through critical analysis of the methodology, evidence and conclusions, both qualitatively and quantitatively.

1

1c. What are the key features of this specification?

Our GCSE (9–1) in Chemistry A (Gateway Science) specification is designed with a concept-led approach and provides a flexible way of teaching. The specification:

- is laid out clearly in a series of teaching topics with guidance included where required to provide further advice on delivery
- is co-teachable with the GCSE (9–1) in Combined Science A (Gateway Science)
- embeds practical requirements within the teaching topics
- identifies opportunities for carrying out practical activities that enhance learners' understanding of chemistry theory and practical skills
- highlights opportunities for the introduction of key mathematical requirements (see Appendix 5e and the To include column for each topic) into your teaching
- identifies, within the Working scientifically column, how the skills, knowledge and understanding of working scientifically (WS) can be incorporated within teaching.

1d. How do I find out more information?

Whether new to our specifications, or continuing on from our legacy offerings, you can find more information on our webpages at www.ocr.org.uk

Visit our subject pages to find out more about the assessment package and resources available to support your teaching. The science team also release a termly newsletter *Science Spotlight* (despatched to centres and available from our subject pages).

If you are not already a registered OCR centre then you can find out more information on the benefits of becoming one at: www.ocr.org.uk

If you are not yet an approved centre and would like to become one go to: www.ocr.org.uk/approvals

Want to find out more?

You can contact the Science Subject Advisors:

2 The specification overview

2a. OCR's GCSE (9–1) in Chemistry A (Gateway Science) (J248)

Learners are entered for either Foundation Tier (Paper 1 and Paper 2) or Higher Tier (Paper 3 and Paper 4) to be awarded the OCR GCSE (9–1) in Chemistry A (Gateway Science).

Content Overview

Assessment Overview

Foundation Tier, grades 5 to 1

Content is split into six teaching topics C1–C6 and a practical activity skills topic C7:

- Topic C1: Particles
- Topic C2: Elements, compounds and mixtures
- Topic C3: Chemical reactions
- Topic C4: Predicting and identifying reactions and products
- Topic C5: Monitoring and controlling chemical reactions
- Topic C6: Global challenges

Paper 1 assesses content from Topics C1–C3 and C7.

Paper 2 assesses content from Topics C4–C6 and C7, with assumed knowledge of Topics C1–C3.

Paper 1
J248/01

90 marks
1 hour 45 minutes
Written paper

50%
of total
GCSE

Paper 2
J248/02

90 marks
1 hour 45 minutes
Written paper

50%
of total
GCSE

Higher Tier, grades 9 to 4

Content is split into six teaching topics C1–C6 and a practical activity skills topic C7:

- Topic C1: Particles
- Topic C2: Elements, compounds and mixtures
- Topic C3: Chemical reactions
- Topic C4: Predicting and identifying reactions and products
- Topic C5: Monitoring and controlling chemical reactions
- Topic C6: Global challenges

Paper 3 assesses content from Topics C1–C3 and C7.

Paper 4 assesses content from Topics C4–C6 and C7, with assumed knowledge of Topics C1–C3.

Paper 3
J248/03

90 marks
1 hour 45 minutes
Written paper

50%
of total
GCSE

Paper 4
J248/04

90 marks
1 hour 45 minutes
Written paper

50%
of total
GCSE

J248/02 and J248/04 include synoptic assessment.

2b. Content of GCSE (9–1) in Chemistry A (Gateway Science) (J248)

The GCSE (9–1) in Chemistry A (Gateway Science) specification content is specified in section 2c. It is divided into six teaching topics C1-C6 and a practical activity skills topic C7.

Learning at GCSE (9–1) in Chemistry A (Gateway Science) is described in the tables that follow:

Overview of the content layout

Topic C1: Topic title

C1.1 sub-topic

Summary

A short overview of the sub-topic that will be assessed in the examinations.

Common misconceptions

Common misconceptions students often have associated with this topic.

Underlying knowledge and understanding

Underlying knowledge and understanding learners should be familiar with linked to the sub-topic.

Tiering

A brief summary of the tiering of the sub-topic.

Reference	Mathematical learning outcomes	Mathematical skills (See appendix 5f)
OCRs mathematics reference code	This column defines the areas of mathematics that will need to be taught specifically within the context of this sub-topic. Questions in the examination will assess these learning outcomes within the context of the topic.	Mathematical skill code as indicated in Appendix 5f

Topic content		Opportunities to cover: Items that are contained within these columns are intended as a starting point for lesson planning.		Practical suggestions (See topic C7)	
Learning outcomes		Maths (See appendix 5e)	Working scientifically (See appendix 5d)		
Spec. reference number <input checked="" type="checkbox"/>	Column specifies the subject content that will be assessed in the examinations. This symbol indicates content that is found only in the chemistry separate science qualification.	This column is included to provide further/specific advice on delivery of the learning outcome.	Mathematical skills will be assessed throughout the examination. This column highlights the mathematical skills that could be taught alongside the topic content.	Working scientifically will be assessed throughout the examination. This column highlights the working scientifically skills that could be taught alongside the topic content.	The compulsory practical skills covered by the Practical Activity Groups or PAGs are indicated in the table in Topic C7. Activities in this column can be used to supplement the PAGs using topic appropriate experiments.

Chemistry key ideas

Chemistry is the science of the composition, structure, properties and reactions of matter, understood in terms of atoms, atomic particles and the way they are arranged and link together. It is concerned with the synthesis, formulation, analysis and characteristic properties of substances and materials of all kinds.

Learners should be helped to appreciate the achievements of chemistry in showing how the complex and diverse phenomena of both the natural and man-made worlds can be described in terms of a small number of key ideas which are of universal application, and which can be illustrated in the separate topics set out below. These ideas include:

- matter is composed of tiny particles called atoms and there are about 100 different naturally occurring types of atoms called elements
- elements show periodic relationships in their chemical and physical properties these periodic properties can be explained in terms of the atomic structure of the elements
- atoms bond by either transferring electrons from one atom to another or by sharing electrons
- the shapes of molecules (groups of atoms bonded together) and the way giant structures are arranged is of great importance in terms of the way they behave
- there are barriers to reaction so reactions occur at different rates
- chemical reactions take place in only three different ways:
 - proton transfer
 - electron transfer
 - electron sharing
- energy is conserved in chemical reactions so can therefore be neither created or destroyed.

Summary of content for GCSE (9–1) in Chemistry A (Gateway Science)

Topic C1: Particles	Topic C2: Elements, compounds and mixtures	Topic C3: Chemical reactions
C1.1 The particle model C1.2 Atomic structure	C2.1 Purity and separating mixtures C2.2 Bonding C2.3 Properties of materials	C3.1 Introducing chemical reactions C3.2 Energetics C3.3 Types of chemical reactions C3.4 Electrolysis
Topic C4: Predicting and identifying reactions and products	Topic C5: Monitoring and controlling chemical reactions	Topic C6: Global challenges
C4.1 Predicting chemical reactions C4.2 Identifying the products of chemical reactions	C5.1 Monitoring chemical reactions C5.2 Controlling reactions C5.3 Equilibria	C6.1 Improving processes and products C6.2 Organic chemistry C6.3 Interpreting and interacting with earth systems

Topic 7 is a practical-based topic which provides learners with the necessary skills to undertake the 15% practical content in the examinations.

2c. Content of topics C1 to C6

Topic C1: Particles

C1.1 The particle model

Summary

This short section introduces the particle model and its explanation of different states of matter. A simple particle model can be used to represent the arrangement of particles in the different states of matter and to explain observations during changes in state. It does not, however, explain why different materials have different properties. This explanation is that the particles themselves and how they are held together must be different in some way. Elements are substances that are made up of only one type of atom and atoms of different elements can combine to make compounds.

Underlying knowledge and understanding

Learners should be familiar with the different states of matter and their properties. Learners should be aware of the energy changes when a change of state occurs. They should also be familiar with changes of state in terms of the particle model. Learners should have sufficient grounding in the particle model to be able to apply it to unfamiliar materials and contexts.

Common misconceptions

Learners commonly intuitively adhere to the idea that matter is continuous. For example, they believe that the space between gas particles is filled or non-existent, or that particles expand when they are heated. The notion that empty space exists between particles is problematic because this lacks supporting sensory evidence. They also show difficulty understanding the concept of changes in state being reversible; this should be addressed during the teaching of this topic.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Reference	Mathematical learning outcomes	Mathematical skills
CM1.1i	represent three-dimensional shapes in two dimensions and vice versa when looking at chemical structures, e.g. allotropes of carbon	M5b

Topic content		Opportunities to cover:		Practical suggestions
Learning outcomes	To include	Maths	Working scientifically	
C1.1a	describe the main features of the particle model in terms of states of matter and change of state	M5b	WS1.1a, WS1.1b	
C1.1b	explain in terms of the particle model the distinction between physical changes and chemical changes			
C1.1c	explain the limitations of the particle model in relation to changes of state when particles are represented by inelastic spheres (e.g. like bowling balls)	M5b	WS1.1c	Observations of change of state with comparison to chemical changes.

C1.2 Atomic structure

Summary

An atom is the smallest component of an element that gives an element its property. These properties can be explained by models of atomic structure. Current models suggest that atoms are made of smaller sub-atomic particles called protons, neutrons and electrons. They suggest that atoms are composed of a nucleus surrounded by electrons. The nucleus is composed of neutrons and protons. Atoms of each element have the same number of protons as electrons. Atoms of different elements have different numbers of protons. Atoms of the same element will have the same number of protons but may have different numbers of neutrons.

Underlying knowledge and understanding

Learners should be familiar with the simple (Dalton) atomic model.

Common misconceptions

Learners commonly have difficulty understanding the concept of isotopes due to the fact they think that neutral atoms have the same number of protons and neutrons. They also find it difficult to distinguish between the properties of atoms and molecules. Another common misconception is that a positive ion gains protons or a negative ion loses protons i.e. that there is a change in the nucleus of the atom rather than a change in the number of electrons.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Reference	Mathematical learning outcomes	Mathematical skills
CM1.2i	relate size and scale of atoms to objects in the physical world	M4a
CM1.2ii <input checked="" type="checkbox"/>	estimate size and scale of atoms and nanoparticles	M1c

Topic content		Opportunities to cover:		Practical suggestions
Learning outcomes	To include	Maths	Working scientifically	
C1.2a	describe how and why the atomic model has changed over time		WS1.1a, WS1.1i, WS1.2b	Timeline of the atomic model.
C1.2b	describe the atom as a positively charged nucleus surrounded by negatively charged electrons, with the nuclear radius much smaller than that of the atom and with most of the mass in the nucleus		WS1.4a	
C1.2c	recall the typical size (order of magnitude) of atoms and small molecules	the concept that typical atomic radii and bond length are in the order of 10^{-10}m	M1c, M4a	WS1.1c, WS1.4b, WS1.4c, WS1.4d, WS1.4e, WS1.4f
C1.2d	recall relative charges and approximate relative masses of protons, neutrons and electrons			WS1.4a, WS1.4b, WS1.4c
C1.2e	calculate numbers of protons, neutrons and electrons in atoms and ions, given atomic number and mass number of isotopes	definitions of an ion, atomic number, mass number and an isotope, also the standard notation to represent these		WS1.3c, WS1.4b

Topic C2: Elements, compounds and mixtures

C2.1 Purity and separating mixtures

Summary

In chemical terms elements and compounds are pure substances and mixtures are impure substances. Chemically pure substances can be identified using melting point. Many useful materials that we use today are mixtures. There are many methods of separating mixtures including filtration, crystallisation, distillation and chromatographic techniques.

Underlying knowledge and understanding

Learners should be familiar with the concept of pure substances. They should have met simple separation techniques of mixtures: filtration, evaporation and distillation. The identification of pure substances in terms of melting point, boiling point and chromatography will also have been met before.

Common misconceptions

Learners commonly misuse the word pure and confuse it with natural substances or a substance that has not been tampered with. They think that when a substance dissolves that the solution is pure and not a mixture.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Reference	Mathematical learning outcomes	Mathematical skills
CM2.1i	arithmetic computation, ratio, percentage and multistep calculations permeates quantitative chemistry	M1a, M1c, M1d
CM2.1ii	provide answers to an appropriate number of significant figures	M2a
CM2.1iii	change the subject of a mathematical equation	M3b, M3c
CM2.1iv	arithmetic computation and ratio when determining empirical formulae, balancing equations	M3b, M3c

Topic content		Opportunities to cover:		Practical suggestions
Learning outcomes	To include	Maths	Working scientifically	
C2.1a	explain what is meant by the purity of a substance, distinguishing between the scientific and everyday use of the term 'pure'		WS1.4a	Purification of compounds. (PAG C4, PAG C7)
C2.1b	use melting point data to distinguish pure from impure substances	M1a, M1c, M1d, M2a		Measurement of melting point.
C2.1c	calculate relative formula masses of species separately and in a balanced chemical equation	the definition of relative atomic mass, relative molecular mass and relative formula mass	M3b, M3c	WS1.3c, WS1.4c
C2.1d	deduce the empirical formula of a compound from the relative numbers of atoms present or from a model or diagram and vice versa		M3b, M3c	WS1.1b, WS1.4a
C2.1e	explain that many useful materials are formulations of mixtures	alloys		
C2.1f	describe, explain and exemplify the processes of filtration, crystallisation, simple distillation, and fractional distillation	knowledge of the techniques of filtration, crystallisation, simple distillation and fractional distillation		WS1.2b, WS1.2c, WS2a, WS2b Separation of mixtures and purification of compounds. (PAG C4, PAG C7) Distillation of mixtures (PAG C4)
C2.1g	describe the techniques of paper and thin layer chromatography	using aqueous and non-aqueous solvents and locating agents		WS1.2b, WS1.2c, WS1.4a, WS2a, WS2b Paper or thin layer chromatography. (PAG C3)
C2.1h	recall that chromatography involves a stationary and a mobile phase and that separation depends on the distribution between the phases	identification of the mobile and stationary phases		WS1.4a

Learning outcomes		To include	Maths	Working scientifically	Practical suggestions
C2.1i	interpret chromatograms, including measuring R_f values	the recall and the use of the formula	M3b, M3c	WS1.3c, WS1.4a	
C2.1j	suggest suitable purification techniques given information about the substances involved				
C2.1k	suggest chromatographic methods for distinguishing pure from impure substances	paper, thin layer (TLC) and gas chromatography		WS1.4a	Using chromatography to identify mixtures of dyes in an unknown ink. (PAG C3)

C2.2 Bonding

Summary

A simple electron energy level model can be used to explain the basic chemical properties of elements. When chemical reactions occur, they can be explained in terms of losing, gaining or sharing of electrons. The ability of an atom to lose, gain or share electrons depends on its atomic structure. Atoms that lose electrons will bond with atoms that gain electrons. Electrons will be transferred between the atoms to form a positive ion and a negative ion. These ions attract one another in what is known as an ionic bond. Atoms that share electrons can bond with other atoms that share electrons to form a molecule. Atoms in these molecules are held together by covalent bonds.

Underlying knowledge and understanding

Learners should be familiar with the simple (Dalton) atomic model. They should be familiar with the principles underlying the Mendeleev Periodic Table and the modern Periodic Table including periods and groups, and metals and non-metals. Learners should have some knowledge of the properties of metals and

non-metals including the chemical properties of metal and non-metal oxides with respect to acidity.

Common misconceptions

Learners do not always appreciate that the nucleus of an atom does not change when an electron is lost, gained or shared. They also find it difficult to predict the numbers of atoms that must bond in order to achieve a stable outer level of electrons. Learners think that chemical bonds are physical things made of matter. They also think that pairs of ions such as Na^+ and Cl^- are molecules. They do not have an awareness of the 3D nature of bonding and therefore the shape of molecules.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Reference	Mathematical learning outcomes	Mathematical skills
CM2.2i <input checked="" type="checkbox"/>	estimate size and scale of atoms and nanoparticles	M1c
CM2.2ii	represent three-dimensional shapes in two dimensions and vice versa when looking at chemical structures, e.g. allotropes of carbon	M5b
CM2.2iii	translate information between diagrammatic and numerical forms	M4a

Topic content		Opportunities to cover:			
Learning outcomes	To include	Maths	Working scientifically	Practical suggestions	
C2.2a	describe metals and non-metals and explain the differences between them on the basis of their characteristic physical and chemical properties		WS1.3f, WS1.4a		
C2.2b	explain how the atomic structure of metals and non-metals relates to their position in the Periodic Table				
C2.2c	explain how the position of an element in the Periodic Table is related to the arrangement of electrons in its atoms and hence to its atomic number	group number and period number	M1c	WS1.4a	
C2.2d	describe and compare the nature and arrangement of chemical bonds in: <ul style="list-style-type: none"> i. ionic compounds ii. simple molecules iii. giant covalent structures iv. polymers v. metals 		M5b, M4a	WS1.4a	Make ball and stick models of molecules.
C2.2e	explain chemical bonding in terms of electrostatic forces and the transfer or sharing of electrons			WS1.4a	
C2.2f	construct dot and cross diagrams for simple covalent and binary ionic substances		M4a	WS1.4a	

Learning outcomes	To include	Maths	Working scientifically	Practical suggestions
C2.2g describe the limitations of particular representations and models	dot and cross diagrams, ball and stick models and two- and three-dimensional representations	M5b	WS1.1c	
C2.2h explain how the reactions of elements are related to the arrangement of electrons in their atoms and hence to their atomic number			WS1.1b, WS1.3f, WS1.4a	
C2.2i explain in terms of atomic number how Mendeleev's arrangement was refined into the modern Periodic Table			WS1.1a, WS1.4a	

C2.3 Properties of materials

Summary

This section explores the physical properties of elements and compounds and how the nature of their bonding is a factor in their properties.

Underlying knowledge and understanding

Learners will know the difference between an atom, element and compound.

Common misconceptions

Learners commonly have a limited understanding of what can happen during chemical reactions, for example substances may explode, burn, contract, expand or change state.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Reference	Mathematical learning outcomes	Mathematical skills
CM2.3i	represent three-dimensional shapes in two dimensions and vice versa when looking at chemical structures, e.g. allotropes of carbon	M5b

C2.3j <input checked="" type="checkbox"/>	explain the possible risks associated with some nanoparticulate materials		WS1.1d, WS1.1f, WS1.1h, WS1.1i, WS1.4a	

Topic C3: Chemical reactions

C3.1 Introducing chemical reactions

Summary

A chemical equation represents, in symbolic terms, the overall change in a chemical reaction. New materials are formed through chemical reactions but mass will be conserved. This can be explained by a model involving the rearrangement of atoms. Avogadro gave us a system of measuring the amount of a substance in moles.

Underlying knowledge and understanding

Learners should be familiar with chemical symbols and formulae for elements and compounds. They should also be familiar with representing chemical reactions using formulae and equations. Learners will have knowledge of conservation of mass, changes of state and chemical reactions.

Common misconceptions

Although learners may have met the conservation of mass they still tend to refer to chemical reactions as losing mass. They understand that mass is conserved but not the number or species of atoms. They may think that the original substance vanishes ‘completely and forever’ in a chemical reaction.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers.

All other statements will be assessed in both Foundation and Higher Tier papers.

C3.1e	construct balanced ionic equations	M1a, M1c		
C3.1f	describe the physical states of products and reactants using state symbols (s, l, g and aq)			
C3.1g	recall and use the definitions of the Avogadro constant (in standard form) and of the mole	the calculation of the mass of one atom/molecule In recognition of IUPAC's review, we will accept both the classical (carbon-12 based) and revised (Avogadro constant based) definitions of the mole in examinations from June 2018 onwards (see https://iupac.org/new-definition-mole-arrived/)	M1b, M1c WS1.4b, WS1.4c, WS1.4d, WS1.4f	
C3.1h	explain how the mass of a given substance is related to the amount of that substance in moles and vice versa	M1c, M2a	WS1.4b, WS1.4c	

Learning outcomes	To include	Maths	Working scientifically	Practical suggestions
C3.1i	recall and use the law of conservation of mass		WS1.4c	
C3.1j	explain any observed changes in mass in non-enclosed systems during a chemical reaction and explain them using the particle model		WS1.1b, WS1.4c	
C3.1k	deduce the stoichiometry of an equation from the masses of reactants and products and explain the effect of a limiting quantity of a reactant	M1c	WS1.3c, WS1.4c, WS1.4d, WS1.4f	
C3.1l	use a balanced equation to calculate masses of reactants or products	M1c	WS1.3c, WS1.4c	

C3.2 Energetics

Summary

Chemical reactions are accompanied by an energy change. A simple model involving the breaking and making of chemical bonds can be used to interpret and calculate the energy change.

Underlying knowledge and understanding

Learners should be familiar with exothermic and endothermic chemical reactions.

Common misconceptions

Learners commonly have the idea that energy is lost or used up. They do not grasp the idea that energy is transferred. Learners also wrongly think that energy is released when bonds break and do not link this release of energy with the formation of bonds. They also may think for example that a candle burning is endothermic because heat is needed to initiate the reaction.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

C3.2c	explain activation energy as the energy needed for a reaction to occur		WS1.4c	
C3.2d	calculate energy changes in a chemical reaction by considering bond making and bond breaking energies	M1a	WS1.3c, WS1.4c	

C3.3 Types of chemical reactions

Summary

Chemical reactions can be classified according to changes at the atomic and molecular level. Examples of these include reduction, oxidation and neutralisation reactions.

Underlying knowledge and understanding

Learners should be familiar with combustion, thermal decomposition, oxidation and displacement reactions. They will be familiar with defining acids and alkalis in terms of neutralisation reactions. Learners will have met reactions of acids with alkalis to produce a salt and water and reactions of acids with metals to produce a salt and hydrogen. They should have met the pH scale for measuring acidity and alkalinity, and some indicators.

Common misconceptions

Learners commonly intuitively adhere to the idea that hydrogen ions in an acid are still part of the molecule, not free in the solution. They tend to have little understanding of pH, for example, they tend to think that alkalis are less corrosive than acids. Learners also may think that the strength of acids and bases and concentration mean the same thing.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers.

All other statements will be assessed in both Foundation and Higher Tier papers.

C3.4 Electrolysis

Summary

Decomposition of a liquid during the conduction of electricity is a chemical reaction called electrolysis. This section explores the electrolysis of various molten ionic liquids and aqueous ionic solutions.

Underlying knowledge and understanding

Learners should be familiar with ionic solutions and solids.

Common misconceptions

A common misconception is that ionic solutions conduct because of the movement of electrons. Another common misconception is that ionic solids do not conduct electricity because electrons cannot move.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

C3.4e	describe the technique of electrolysis using inert and non-inert electrodes			

Topic C4: Predicting and identifying reactions and products

C4.1 Predicting chemical reactions

Summary

Models of how substances react and the different types of chemical reactions that can occur enable us to predict the likelihood and outcome of a chemical reaction. The current Periodic Table was developed based on observations of the similarities and differences in the properties of elements. The way that the Periodic Table is arranged into groups and periods reveals the trends and patterns in the behaviour of the elements. The model of atomic structure provides an explanation for trends and patterns in the properties of elements. The arrangement of elements in groups and periods reveals the relationship between observable properties and how electrons are arranged in the atoms of each element.

Underlying knowledge and understanding

Learners should be familiar with the principles underpinning the Mendeleev Periodic Table; the Periodic Table: periods and groups; metals and non-metals; the varying physical and chemical properties of different elements; the chemical properties of metals and non-metals; the chemical properties of metal and

non-metal oxides with respect to acidity and how patterns in reactions can be predicted with reference to the Periodic Table.

Common misconceptions

Learners consider the properties of particles of elements to be the same as the bulk properties of that element. They tend to rely on the continuous matter model rather than the particle model. Learners confuse state changes and dissolving with chemical changes. Also, since the atmosphere is invisible to the eye and learners rely on concrete, visible information, this means they therefore often avoid the role of oxygen in their explanations for open system reactions. Even if the role of oxygen is appreciated, learners do not realise that solid products of an oxidation reaction have more mass than the starting solid.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

C4.1f	deduce an order of reactivity of metals based on experimental results		WS1.3e, WS2a	Displacement reactions involving metals and metal salts. (PAG C1, PAG C7, PAG C8)

C4.2 Identifying the products of chemical reactions

Summary

Types of substances can be classified according to their general physical and chemical properties. This section explores the tests that can be used to identify the products of reactions by looking at their physical and chemical properties.

Underlying knowledge and understanding

Learners should be familiar with cations and anions from their work on electrolysis.

Common misconceptions

Learners confuse mass and density so in reactions involving change of state, learners reason that the products from a precipitation reaction are heavier than the starting materials and that when a gas is produced the reaction has lost mass overall.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Topic C5: Monitoring and controlling chemical reactions

C5.1 Monitoring chemical reactions

Summary

This topic tackles the relationship of moles to the concentration of a solution and the volume of a gas. It also tackles the calculation of the mass of a substance in terms of its molarity. The topic then moves on to look at using equations to make predictions about yield by calculations and to calculate atom economy.

Underlying knowledge and understanding

Learners should be familiar with the mole from Topic C3 and know that it measures the amount of substance. They should be familiar with representing chemical reactions using formulae and using equations.

Common misconceptions

The most common problem learners' encounter with these calculations is their lack of understanding of ratios. Also most learners think that the mole and mass are the same thing. This is reinforced by use of phrases such as '1 mole is 12 g of carbon', '1 mole is the relative atomic mass in grammes' or '1 mol = 12 g C' in teaching and in textbooks equating amount of substance to mass, portion of substance, number of particles (Avogadro's number) or number of moles. All these phrases reinforce the idea that amount of substance is a measure of mass or a number.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

C5.2 Controlling reactions

Summary

The rate and yield of a chemical reaction can be altered by changing the physical conditions.

Underlying knowledge and understanding

Learners should be familiar with the action of catalysts in terms of rate of reaction. They should know the term surface area and what it means.

Common misconceptions

Learners often misinterpret rate graphs and think that catalysts take part in reactions and run out/get used up.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

C5.2i recall that enzymes act as catalysts in biological systems				

C5.3 Equilibria

Summary

In a reaction, when the rate of the forward reaction equals the rate of the backwards reaction, the reaction in a closed system is said to be in equilibrium.

Underlying knowledge and understanding

Learners will be familiar with representing chemical reactions using formulae and using equations.

Common misconceptions

Learners often do not recognise that when a dynamic equilibrium is set up in a reaction the concentration of the reactants and products remain constant. They think that the concentrations of all substances are equal. Learners also sometimes perceive a dynamic equilibrium as two reactions.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Topic C6: Global challenges

This topic seeks to integrate learners' knowledge and understanding of chemical systems and processes, with the aim of applying it to global challenges. Applications of chemistry can be used to help humans improve their own lives and strive to create a sustainable world for future generations, and these

challenges are considered in this topic. It therefore provides opportunities to draw together the concepts covered in earlier topics, allowing synoptic treatment of the subject of chemistry.

C6.1 Improving processes and products

Summary

Historically, new materials have been developed through trial and error, experience etc. but as our understanding of the structure of materials and chemical processes has improved we are increasing our ability to manipulate and design new materials. Industry is continually looking to make products that have a better performance and are sustainable to produce. This section also explores the extraction of raw materials and their use in making new products.

Underlying knowledge and understanding

Learners should be familiar with the properties of ceramics, polymers and composites. They should have knowledge of the order of metals and carbon in

the reactivity series. Learners should have met the method of using carbon to obtain metals from metal oxides. They should also be aware that the Earth has limited resources and the benefits of recycling materials.

Common misconceptions

Learners often think that chemical reactions will continue until all the reactants are exhausted. They also think that equilibrium is a static condition.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

C6.1i <input checked="" type="checkbox"/> recall the importance of nitrogen, phosphorus and potassium compounds in agricultural production			WS1.4a	
C6.1j <input checked="" type="checkbox"/> describe the industrial production of fertilisers as several integrated processes using a variety of raw materials	ammonium nitrate and ammonium sulfate		WS1.2a, WS1.2b, WS1.2c, WS1.2e, WS2a, WS2b	
C6.1k describe the basic principles in carrying out a life-cycle assessment of a material or product	the use of resources and impact on the environment of all stages of a life-cycle assessment: <ul style="list-style-type: none">• making materials for a product from raw materials through to the process used to make the product• the use of the product• transport of the product• the method used for its disposal at the end of its life			

Learning outcomes		To include	Maths	Working scientifically	Practical suggestions
C6.1l	interpret data from a life-cycle assessment of a material or product				
C6.1m	describe a process where a material or product is recycled for a different use, and explain why this is viable			WS1.1f, WS1.1g	
C6.1n	evaluate factors that affect decisions on recycling			WS1.1f, WS1.1g	
C6.1o <input checked="" type="checkbox"/>	describe the composition of some important alloys in relation to their properties and uses	steel, brass, bronze, solder, duralumin			
C6.1p <input checked="" type="checkbox"/>	describe the process of corrosion and the conditions which cause corrosion	iron and other metals			
C6.1q <input checked="" type="checkbox"/>	explain how mitigation of corrosion is achieved by creating a physical barrier to oxygen and water and by sacrificial protection				
C6.1r <input checked="" type="checkbox"/>	compare quantitatively the physical properties of glass and clay ceramics, polymers, composites and metals				
C6.1s <input checked="" type="checkbox"/>	explain how the properties of materials are related to their uses and select appropriate materials given details of the usage required			WS1.1e, WS1.3f	

C6.2 Organic chemistry

Summary

Carbon chemistry is the basis of life on Earth. Organic chemistry is the basis of many of the materials we produce. Organic compounds are covalent in nature and react in a predictable pattern. Crude oil forms the basis of many useful by-products.

Underlying knowledge and understanding

Learners should be familiar with reactions and displayed formula.

Common misconceptions

Learners tend not to bring the concepts from general chemistry in their study of organic chemistry. They have difficulty identifying functional groups and naming and drawing the compounds.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Reference	Mathematical learning outcomes	Mathematical skills
CM6.2i <input checked="" type="checkbox"/>	represent three-dimensional shapes in two dimensions and vice versa when looking at chemical structures, e.g. allotropes of carbon	M5b

Topic content		Opportunities to cover:		Practical suggestions	
Learning outcomes	To include	Maths	Working scientifically		
C6.2a <input checked="" type="checkbox"/>	recognise functional groups and identify members of the same homologous series	homologous series, of alkanes, alkenes, alcohols and carboxylic acids			
C6.2b <input checked="" type="checkbox"/>	name and draw the structural formulae, using fully displayed formulae, of the first four members of the straight chain alkanes, alkenes, alcohols and carboxylic acids		M5b	WS1.4a	Use of models.
C6.2c <input checked="" type="checkbox"/>	predict the formulae and structures of products of reactions of the first four and other given members of the homologous series of alkanes, alkenes and alcohols	combustion; addition of bromine and hydrogen across a double bond; oxidation of alcohols to carboxylic acids using potassium manganate(VII)			
C6.2d <input checked="" type="checkbox"/>	recall the basic principles of addition polymerisation by reference to the functional group in the monomer and the repeating units in the polymer				
C6.2e <input checked="" type="checkbox"/>	explain the basic principles of condensation polymerisation	reference to the functional groups of the monomers, the minimum number of functional groups within a monomer, the number of repeating units in the polymer, and simultaneous formation of a small molecule, e.g. a polyester or polyamide, using block diagrams to represent polymers		WS1.4a	

Learning outcomes	To include	Maths	Working scientifically	Practical suggestions
C6.2f <input checked="" type="checkbox"/> describe practical techniques to make a polymer by condensation			WS1.2a, WS1.2b, WS1.2c, WS1.4a, WS2a, WS2b	Making nylon.
C6.2g <input checked="" type="checkbox"/> deduce the structure of an addition polymer from a simple alkene monomer and vice versa	the following representation of a polymer [repeat unit] _n		WS1.4a	
C6.2h <input checked="" type="checkbox"/> recall that DNA is a polymer made from four different monomers called nucleotides and that other important naturally-occurring polymers are based on sugars and amino-acids	the names of the nucleotides		WS1.4a	
C6.2i <input checked="" type="checkbox"/> recall that it is the generality of reactions of functional groups that determine the reactions of organic compounds			WS1.4a	
C6.2j describe the separation of crude oil by fractional distillation	the names of the fractions		WS1.3f, WS1.4a	
C6.2k explain the separation of crude oil by fractional distillation	molecular size and intermolecular forces			
C6.2l describe the fractions as largely a mixture of compounds of formula C _n H _{2n+2} which are members of the alkane homologous series			WS1.4a	
C6.2m recall that crude oil is a main source of hydrocarbons and is a feedstock for the petrochemical industry			WS1.4a	
C6.2n explain how modern life is crucially dependent upon hydrocarbons and recognise that crude oil is a finite resource			WS1.1c, WS1.1f, WS1.1e, WS1.4a	

Learning outcomes	To include	Maths	Working scientifically	Practical suggestions
C6.2o	describe the production of materials that are more useful by cracking			
C6.2p <input checked="" type="checkbox"/>	recall that a chemical cell produces a potential difference until the reactants are used up			
C6.2q <input checked="" type="checkbox"/>	evaluate the advantages and disadvantages of hydrogen/oxygen and other fuel cells for given uses		WS1.1g, WS1.1i	

C6.3 Interpreting and interacting with earth systems

Summary

As our understanding of the structure of materials and chemical processes has improved we are increasing our ability to interpret and understand chemical and earth systems. Understanding how we interact with them is very important to our survival as a species. This section starts with the history of the atmosphere and moves on to how human activity could be affecting its composition.

Underlying knowledge and understanding

Learners should have some understanding of the composition of the Earth, the structure of the Earth, the rock cycle, the carbon cycle, the composition of the atmosphere and the impact of human activity on the climate.

Common misconceptions

Learners think that the atmosphere is large and that small increases of carbon dioxide or a few degrees of temperature change do not make a difference to the climate. They may consider that global warming is caused by the ozone hole and that human activities alone cause the greenhouse effect.

Tiering

Statements shown in **bold** type will only be tested in the Higher Tier papers. All other statements will be assessed in both Foundation and Higher Tier papers.

Reference	Mathematical learning outcomes	Mathematical skills
CM6.3i	extract and interpret information from charts, graphs and tables	M2c, M4a
CM6.3ii	use orders of magnitude to evaluate the significance of data	M2h

Topic content		Opportunities to cover:		Practical suggestions	
Learning outcomes	To include	Maths	Working scientifically		
C6.3a	interpret evidence for how it is thought the atmosphere was originally formed	knowledge of how the composition of the atmosphere has changed over time	M2c, M4a, M2h	WS1.3e	
C6.3b	describe how it is thought an oxygen-rich atmosphere developed over time		M2h	WS1.1a	
C6.3c	describe the greenhouse effect in terms of the interaction of radiation with matter within the atmosphere				
C6.3d	evaluate the evidence for additional anthropogenic (human activity) causes of climate change and describe the uncertainties in the evidence base	the correlation between change in atmospheric carbon dioxide concentration and the consumption of fossil fuels	M2c, M4a, M2h		
C6.3e	describe the potential effects of increased levels of carbon dioxide and methane on the Earth's climate and how these effects may be mitigated	consideration of scale, risk and environmental implications	M2c, M4a, M2h	WS1.1f, WS1.1h	
C6.3f	describe the major sources of carbon monoxide, sulfur dioxide, oxides of nitrogen and particulates in the atmosphere and explain the problems caused by increased amounts of these substances			WS1.4a	
C6.3g	describe the principal methods for increasing the availability of potable water in terms of the separation techniques used	ease of treatment of waste, ground and salt water			

Topic C7: Practical skills

Compliance with the requirements for practical work

It is compulsory that learners complete at least *eight* practical activities.

OCR has split the requirements from the Department for Education '*Biology, chemistry and physics GCSE subject content, July 2015*' – Appendix 4 into eight Practical Activity Groups or PAGs.

The Practical Activity Groups allow centres flexibility in their choice of activity. Upon completion of at least eight practical activities, each Learner must have had the opportunity to use all of the apparatus and techniques described in the following tables of this topic.

The tables illustrate the apparatus and techniques required for each PAG and an example practical that may be used to contribute to the PAG. It should be noted that some apparatus and techniques can be used in more than one PAG. It is therefore important that teachers take care to ensure that learners do have the opportunity to use all of the required apparatus and techniques during the course with the activities chosen by the centre.

Within the specification there are a number of practicals that are described in the 'Practical

suggestions' column. These can count towards each PAG. We are expecting that centres will provide learners with opportunities to carry out a wide range of practical activities during the course. These can be the ones described in the specification or can be practicals that are devised by the centre. Activities can range from whole investigations to simple starters and plenaries.

It should be noted that the practicals described in the specification need to be covered in preparation for the 15% of questions in the written examinations that will assess practical skills. Learners also need to be prepared to answer questions using their knowledge and understanding of practical apparatus, techniques and procedures in written papers.

Safety is an overriding requirement for all practical work. Centres are responsible for ensuring appropriate safety procedures are followed whenever their learners complete practical work.

Use and production of appropriate scientific diagrams to set up and record apparatus and procedures used in practical work is common to all science subjects and should be included wherever appropriate.

Revision of the requirements for practical work

OCR will review the practical activities detailed in Topic 7 of this specification following any revision by the Secretary of State of the apparatus or techniques published specified in respect of the GCSE Chemistry A (Gateway Science) qualification.

OCR will revise the practical activities if appropriate.

If any revision to the practical activities is made, OCR will produce an amended specification which will be published on the OCR website. OCR will then use the following methods to communicate the amendment to centres such as a Notice to Centres sent to all Examinations Officers, e-alerts to centres that have registered to teach the qualification and social media.

The following list includes opportunities for choice and use of appropriate laboratory apparatus for a variety of experimental problem-solving and/or enquiry based activities.

Practical Activity Group (PAG)	Apparatus and techniques that the practical must use or cover	Example of a suitable chemistry activity (a range of practicals are included in the specification and centres can devise their own activity) *
1 Reactivity trend	Safe use and careful handling of gases, liquids and solids, including careful mixing of reagents under controlled conditions, using appropriate apparatus to explore chemical changes and/or products	Use of displacement reactions to identify the reaction trend of Group 7 elements.
2 Electrolysis	Use of appropriate apparatus and techniques to draw, set up and use electrochemical cells for separation and production of elements and compounds	Electrolysis of aqueous sodium chloride or aqueous copper sulfate solution testing for the gases produced.
	Use of appropriate qualitative reagents and techniques to analyse and identify unknown samples or products including gas tests, flame tests, precipitation reactions, and the determination of concentrations of strong acids and strong alkalis ⁸	
3 Separation techniques	Safe use of a range of equipment to purify and/or separate chemical mixtures including evaporation, filtration, crystallisation, chromatography and distillation ⁴	Use of chromatography to identify the mixtures of dyes in an unknown ink
4 Distillation	Safe use of a range of equipment to purify and/or separate chemical mixtures including evaporation, filtration, crystallisation, chromatography and distillation ⁴	Distillation of a mixture, for example, orange juice, cherry cola, hydrocarbons, inks
	Safe use of appropriate heating devices and techniques including use of a Bunsen burner and a water bath or electric heater ²	
	Use of appropriate apparatus to make and record a range of measurements accurately, including mass, time, temperature, and volume of liquids and gases ¹	
5 Identification of species	Use of appropriate qualitative reagents and techniques to analyse and identify unknown samples or products including gas tests, flame tests, precipitation reactions, and the determination of concentrations of strong acids and strong alkalis ⁸	Identify an unknown compound using cation tests, anion tests and flame tests.
	Safe use of appropriate heating devices and techniques including use of a Bunsen burner and a water bath or electric heater ²	

Practical Activity Group (PAG)	Apparatus and techniques that the practical must use or cover	Example of a suitable chemistry activity (a range of practicals are included in the specification and centres can devise their own activity) *
6 Titration	Use of appropriate apparatus and techniques for conducting and monitoring chemical reactions, including appropriate reagents and/or techniques for the measurement of pH in different situations	Titration of a strong acid and strong alkali to find the concentration of the acid using an appropriate pH indicator.
	Use of appropriate qualitative reagents and techniques to analyse and identify unknown samples or products including gas tests, flame tests, precipitation reactions, and the determination of concentrations of strong acids and strong alkalis ⁸	
	Use of appropriate apparatus to make and record a range of measurements accurately, including mass, time, temperature, and volume of liquids and gases ¹	
7 Production of salts	Safe use of a range of equipment to purify and/or separate chemical mixtures including evaporation, filtration, crystallisation, chromatography and distillation ⁴	Production of pure dry sample of a salt
	Use of appropriate apparatus to make and record a range of measurements accurately, including mass, time, temperature, and volume of liquids and gases ¹	
	Use of appropriate apparatus and techniques for conducting and monitoring chemical reactions, including appropriate reagents and/or techniques for the measurement of pH in different situations	
	Safe use and careful handling of gases, liquids and solids, including careful mixing of reagents under controlled conditions, using appropriate apparatus to explore chemical changes and/or products	
	Safe use of appropriate heating devices and techniques including use of a Bunsen burner and a water bath or electric heater ²	
8 Measuring rates of reaction	Use of appropriate apparatus to make and record a range of measurements accurately, including mass, time, temperature, and volume of liquids and gases ¹	Investigate the effect of surface area or concentration on the rate of an acid/carbonate reaction
	Making and recording of appropriate observations during chemical reactions including changes in temperature and the measurement of rates of reaction by a variety of methods such as production of gas and colour change	

* Centres are free to substitute alternative practical activities that also cover the apparatus and techniques from DfE: Biology, chemistry and physics GCSE subject content, July 2015 Appendix 4.

^{1, 2, 4, 8} These apparatus and techniques may be covered in any of the groups indicated. Numbers correspond to those used in DfE: Biology, chemistry and physics GCSE subject content, July 2015 Appendix 4.

Choice of activity

Centres can include additional apparatus and techniques within an activity beyond those listed as the minimum in the above tables. Learners *must* complete a *minimum of eight* practicals covering all the apparatus and techniques listed.

The apparatus and techniques can be covered:

- (i) by using OCR suggested activities (provided as resources)
- (ii) through activities devised by the centre.

Centres can receive guidance on the suitability of their own practical activities through our

free practical activity consultancy service (e-mail: ScienceGCSE@ocr.org.uk).

Where centres devise their own practical activities to cover the apparatus and techniques listed above, the practical must cover all the requirements and be of a level of demand appropriate for GCSE. Each set of apparatus and techniques described in the middle column can be covered by more than one centre devised practical activity e.g. “Use of appropriate apparatus to make and record a range of measurements accurately, including mass, time, temperature, and volume of liquids and gases” could be split into two or more activities (rather than one).

NEA Centre Declaration Form: Practical Science Statement

Centres must provide a written **practical science statement** confirming that reasonable opportunities have been provided to all learners being submitted for entry within that year’s set of assessments to undertake at least **eight** practical activities.

The practical science statement is contained within the NEA Centre Declaration Form which can be found on the OCR website at www.ocr.org.uk/formsfinder. By signing the form, the centre is confirming that they have taken reasonable steps to secure that each learner:

- a) has completed the practical activities set by OCR as detailed in Topic C7
- b) has made a contemporaneous record of:
 - (i) the work which the learner has undertaken during those practical activities, and
 - (ii) the knowledge, skills and understanding which that learner has derived from those practical activities.

Centres should retain records confirming points (a) to (b) above as they may be requested as part of the JCQ inspection process. Centres must provide practical science opportunities for their learners. This does not go so far as to oblige centres to ensure that all of their learners take part in all of the practical science opportunities. There is always a risk that an individual learner may miss the arranged practical science work, for example because of illness. It could be costly for the centre to run additional practical science opportunities for the learner.

However, the opportunities to take part in the specified range of practical work must be given to all learners. Learners who do not take up the full range of opportunities may be disadvantaged as there will be questions on practical science in the GCSE Chemistry A (Gateway Science) assessment. Please see the JCQ publication *Instructions for conducting non-examination assessments* for further information.

Any failure by a centre to provide a practical science statement to OCR in a timely manner (by means of an NEA Centre Declaration Form) will be treated as malpractice and/or maladministration [under General Condition A8 (*Malpractice and maladministration*)].

2d. Prior knowledge, learning and progression

- Learners in England who are beginning a GCSE (9–1) course are likely to have followed a Key Stage 3 .
 - There are no prior qualifications required in order for learners to enter for a GCSE (9–1) in Chemistry A (Gateway Science).
 - GCSEs (9–1) are qualifications that enable learners to progress to further qualifications either Vocational or General.
- There are a number of Science specifications at OCR. Find out more at www.ocr.org.uk.

3 Assessment of GCSE (9–1) in Chemistry A (Gateway Science)

3a. Forms of assessment

The GCSE (9–1) in Chemistry A (Gateway Science) is a linear qualification with 100% external assessment.

OCR's GCSE (9–1) in Chemistry A (Gateway Science) consists of four examined papers that are externally assessed. Two are at Foundation Tier and two are

at Higher Tier. Learners are entered for either the Foundation Tier or the Higher Tier. Each paper carries an equal weighting of 50% for that tier of the GCSE (9–1) qualification. Each paper has a duration of 1 hour and 45 minutes.

3

Chemistry Paper 1 and Paper 3

These papers, one at Foundation Tier and one at Higher Tier, are each worth 90 marks, are split into two sections and assess content from Topics C1 to C3 and C7.

Section A contains multiple choice questions. This section of the paper is worth 15 marks.

Section B includes short answer question styles (practical, maths, structured questions) and an extended six-mark Level of Response question. This section of the paper is worth 75 marks.

Chemistry Paper 2 and Paper 4

These papers, one at Foundation Tier and one at Higher Tier, are each worth 90 marks, are split into two sections and assess content from Topics C4 to C6, with assumed knowledge of Topics C1 to C3 and C7.

Section A contains multiple choice questions. This section of the paper is worth 15 marks.

Section B includes short answer question styles (practical, maths, synoptic questions, structured questions) and an extended six-mark Level of Response question. This section of the paper is worth 75 marks, some of which will be synoptic.

3b. Assessment objectives (AO)

There are three Assessment Objectives in OCR GCSE (9–1) in Chemistry A (Gateway Science).

These are detailed in the table below:

Assessment Objectives		Weighting (%)	
		Higher	Foundation
AO1	Demonstrate knowledge and understanding of: <ul style="list-style-type: none">scientific ideasscientific techniques and procedures.	40	40
AO2	Apply knowledge and understanding of: <ul style="list-style-type: none">scientific ideasscientific enquiry, techniques and procedures.	40	40
AO3	Analyse information and ideas to: <ul style="list-style-type: none">interpret and evaluatemake judgements and draw conclusionsdevelop and improve experimental procedures.	20	20

The Assessment Objectives are further broken down to Assessment Objective elements as shown in the table below.

Assessment Objective elements	
AO1	Demonstrate knowledge and understanding of scientific ideas and scientific techniques and procedures.
AO1.1	Demonstrate knowledge and understanding of scientific ideas.
AO1.2	Demonstrate knowledge and understanding of scientific techniques and procedures.
AO2	Apply knowledge and understanding of scientific ideas and scientific enquiry, techniques and procedures.
AO2.1	Apply knowledge and understanding of scientific ideas.
AO2.2	Apply knowledge and understanding of scientific enquiry, techniques and procedures.
AO3	Analyse information and ideas to interpret and evaluate, make judgements and draw conclusions and develop and improve experimental procedures.
AO3.1	Analyse information and ideas to interpret and evaluate.
AO3.1a	Analyse information and ideas to interpret.
AO3.1b	Analyse information and ideas to evaluate.
AO3.2	Analyse information and ideas to make judgements and draw conclusions.
AO3.2a	Analyse information and ideas to make judgements.

Assessment Objective elements

AO3.2b	Analyse information and ideas to draw conclusions.
AO3.3	Analyse information and ideas to develop and improve experimental procedures.
AO3.3a	Analyse information and ideas to develop experimental procedures.
AO3.3b	Analyse information and ideas to improve experimental procedures.

3c. Command words

3

The key list of common command words used in our exams is listed below. The definitions are intended to provide guidance to teachers and students as to what a student will be expected to do when these words are used in examinations.

The exact response expected to a command word will be dependent on the context. At all times, we advise students to read the full question carefully to be sure of what they are being asked to do.

Command word	Definition
analyse	Separate information into components and identify their characteristics. Discuss the pros and cons of a topic or argument and make reasoned comment.
calculate	Generate a numerical answer, with workings shown.
choose	Select from a list or a number of alternatives.
classify	Assign to a category or group.
compare and contrast	Identify similarities and differences.
complete	Add words, numbers, labels or plots to complete a sentence, table, diagram or graph.
conclude	Make a decision after reasoning something out.
construct	Write out or draw the requested item, e.g. '...Construct a dot and cross diagram for sodium chloride...' or '...Construct a balanced equation for a specific reaction...'
convert	Change a defined item to another defined item, e.g. '...Convert your calculated answer in g to an answer in moles...'
deduce	Use your knowledge and/or supplied data to work something out, e.g. '...Deduce the empirical formula of compound X (using supplied data)...'
define	Use your knowledge to state the meaning of a given term, e.g. '...Define the term specific heat capacity...' or '...Define the term momentum...'
describe	Set out the facts or characteristics. The description of a process should address what happens, and when and/or where it happens. (Compare with 'Explain') For example, when asked to <u>describe</u> the change in rate of reaction seen on a graph, the expected response might be to describe whether the rate of reaction remains constant, or decreases or increases over time.

Command word	Definition
design	Plan and present ideas to show a layout / function / workings / object / system / process.
determine	Obtain a solution by following a set of procedures. Obtain a numerical value by carrying out a series of calculations. Also see 'Find' which is more commonly used for Foundation tier.
discuss	Give an account that addresses a range of ideas and arguments.
draw	Produce a diagram with sufficient detail and labels to illustrate the answer. (Compare with 'Sketch')
estimate	Assign an approximate value.
evaluate	Make a qualitative judgement taking into account different factors and using available knowledge / experience / evidence.
explain	Set out reasons and/or mechanisms to address why and/or how something happens. (Compare with 'Describe') For example, when asked to <u>explain</u> the change in rate of reaction seen on a graph, the expected response would suggest scientific reasons for any change seen, for example in terms of molecular collisions or enzymatic action.
find	Obtain a solution by following a set of procedures. Obtain a numerical value by carrying out a series of calculations. Also see 'Determine'. Find is more commonly used for Foundation tier.
give	A short answer is required without explanation (unless separately requested).
how	In what way?
identify	Recognise, list, name or otherwise characterise.
illustrate	Make clear by using examples or providing diagrams.
justify	Present a reasoned case for actions or decisions made.
label	Add names or other identifying words or symbols to a diagram.
measure	Establish a value using a suitable measuring instrument or technique.
name	Provide appropriate word(s) or term(s).
outline	Provide a description setting out the main characteristics / points.
plan	Consider, set out and communicate what is to be done.
plot	Translate data into a suitable graph or chart, with labelled axes.
predict	Make a judgement of an event or action that will or would happen in the future, as a result of knowledge, experience or evidence.
recall	Use your knowledge of the specification to remember a relevant key fact which needs to be used in the question.
select	Carefully choose as being the most suitable for a task or purpose.
show	Write down details, steps or calculations to prove a fact or answer.

Command word	Definition
sketch	Produce a simple, freehand drawing to illustrate the general point being conveyed. Detail is not required. (Compare with 'Draw') In the context of a graph, the general shape of the curve would be sufficient without plotting precise points. (Compare with 'Plot')
state or define	Express in precise terms the nature, state or meaning.
suggest	Give possible alternatives, produce an idea, put forward (for example) an idea or a plan for consideration.
use / using	The answer must be based on information given in the question.
what	A request for information, clarified by the context or question in which it is contained.
which	Identify an object, word or explanation.
why	For what reason?
write	Present the required information, e.g. '...Write balanced equations that represent the radioactive decay of...'

AO weightings in OCR GCSE (9–1) in Chemistry A (Gateway Science)

The relationship between the Assessment Objectives and the components are shown in the following table:

Component (Foundation Tier)	% of overall GCSE (9–1) in Chemistry A (Gateway Science) (J248)			
	AO1	AO2	AO3	Total
Paper 1 (Foundation Tier) J248/01	20	20	10	50
Paper 2 (Foundation Tier) J248/02	20	20	10	50
Total	40	40	20	100
Component (Higher Tier)	AO1	AO2	AO3	Total
Paper 3 (Higher Tier) J248/03	20	20	10	50
Paper 4 (Higher Tier) J248/04	20	20	10	50
Total	40	40	20	100

3d. Tiers

This scheme of assessment consists of two tiers: Foundation Tier and Higher Tier. Foundation Tier assesses grades 5 to 1 and Higher Tier assesses grades 9 to 4. An allowed grade 3 may be awarded on

the Higher Tier option for learners who are a small number of marks below the grade 3/4 boundary. Learners must be entered for either the Foundation Tier or the Higher Tier.

3e. Total qualification time

Total qualification time (TQT) is the total amount of time, in hours, expected to be spent by a learner to achieve a qualification. It includes both guided learning hours and hours spent in preparation, study,

and assessment. The total qualification time for GCSE Chemistry A is 140 hours. The total guided learning time is 120-140 hours.

3f. Qualification availability outside of England

This qualification is available in England. For Wales and Northern Ireland please check the Qualifications in Wales Portal (QIW) or the Northern Ireland Department of Education Performance Measures /

Northern Ireland Entitlement Framework Qualifications Accreditation Number (NIEFQAN) list to see current availability.

3g. Language

This qualification is available in English only. All assessment materials are available in English only and all candidate work must be in English.

3h. Assessment availability

There will be one examination series available each year in May/June to **all** learners.

All examined components must be taken in the same examination series at the end of the course.

This specification will be certificated from the June 2018 examination series onwards.

3i. Retaking the qualification

Learners can retake the qualification as many times as they wish.

They retake all the papers within the relevant tier to be awarded the qualification.

3j. Assessment of extended response

Extended response questions which are marked using a level of response mark scheme are included in all externally assessed papers. These are indicated in papers and mark schemes by an asterisk (*).

Extended response questions provide learners with the opportunity to demonstrate their ability to construct and develop a sustained line of reasoning which is coherent, relevant, substantiated and logically structured.

3k. Synoptic assessment

Synoptic assessment tests the learners' understanding of the connections between different elements of the subject.

Synoptic assessment involves the explicit drawing together of knowledge, understanding and skills learned in different parts of the GCSE (9–1) course. The emphasis of synoptic assessment is to encourage the development of the understanding of the subject as a discipline. Paper 2 and Paper 4 contain an element of synoptic assessment.

Synoptic assessment requires learners to make and use connections within and between different areas of chemistry, for example by:

- applying knowledge and understanding of more than one area to a particular situation or context
- using knowledge and understanding or principles and concepts in planning experimental and investigative work and in the analysis and evaluation of data
- bringing together scientific knowledge and understanding from different areas of the subject and applying them.

3l. Calculating qualification results

A learner's overall qualification grade for OCR GCSE (9–1) in Chemistry A (Gateway Science) will be calculated by adding together their marks from the two papers taken to give their total weighted mark.

This mark will then be compared to the qualification level grade boundaries for the entry option taken by the learner and for the relevant exam series to determine the learner's overall qualification grade.

4 Admin: what you need to know

The information in this section is designed to give an overview of the processes involved in administering this qualification so that you can speak to your exams officer. All of the following processes require you to submit something to OCR by a specific deadline.

More information about the processes and deadlines involved at each stage of the assessment cycle can be found in the Administration area of the OCR website.

OCR's *Admin overview* is available on the OCR website at <http://www.ocr.org.uk/administration>.

4a. Pre-assessment

Estimated entries

Estimated entries are your best projection of the number of learners who will be entered for a qualification in a particular series.

Estimated entries should be submitted to OCR by the specified deadline. They are free and do not commit your centre in any way.

Final entries

Final entries provide OCR with detailed data for each learner, showing each assessment to be taken. It is essential that you use the correct entry code, considering the relevant entry rules.

Final entries must be submitted to OCR by the published deadlines or late entry fees will apply.

All learners taking a GCSE (9–1) in Chemistry A (Gateway Science) must be entered for one of the following entry options:

Entry option		Components		
Entry code	Title	Code	Title	Assessment type
J248 F	Chemistry A (Gateway Science) (Foundation Tier)	01	Paper 1 (Foundation Tier)	External assessment
		02	Paper 2 (Foundation Tier)	External assessment
J248 H	Chemistry A (Gateway Science) (Higher Tier)	03	Paper 3 (Higher Tier)	External assessment
		04	Paper 4 (Higher Tier)	External assessment

Each learner must be entered for either the Foundation Tier **or** the Higher Tier only. They cannot be entered for a combination of tiers.

Collecting evidence of student performance to ensure resilience in the qualifications system

Regulators have published guidance on collecting evidence of student performance as part of long-term contingency arrangements to improve the resilience of the qualifications system. You should review and consider this guidance when delivering this qualification to students at your centre.

For more detailed information on collecting evidence of student performance please visit our website at: <https://www.ocr.org.uk/administration/general-qualifications/assessment/>.

4b. Special consideration

Special consideration is a post-assessment adjustment to marks or grades to reflect temporary injury, illness or other indisposition at the time the assessment was taken.

Detailed information about eligibility for special consideration can be found in the JCQ publication *A guide to the special consideration process*.

4c. External assessment arrangements

Regulations governing examination arrangements are contained in the JCQ *Instructions for conducting examinations*.

Learners are permitted to use a scientific or graphical calculator for components 01, 02, 03 and 04. Calculators are subject to the rules in the document *Instructions for Conducting Examinations* published annually by JCQ (www.jcq.org.uk).

4

Head of Centre Annual Declaration

The Head of Centre is required to provide a declaration to the JCQ as part of the annual NCN update, conducted in the autumn term, to confirm that the centre is meeting all the requirements detailed in the specification, including that they have provided all candidates with the opportunity to undertake the prescribed practical activities.

Any failure by a centre to provide the Head of Centre Annual Declaration will result in your centre status being suspended and could lead to the withdrawal of our approval for you to operate as a centre.

Private candidates

Private candidates may enter for OCR assessments.

A private candidate is someone who pursues a course of study independently but takes an examination or assessment at an approved examination centre. A private candidate may be a part-time student, someone taking a distance learning course, or someone being tutored privately. They must be based in the UK.

The GCSE Chemistry A (Gateway Science) qualification requires learners to complete eight practical activities. These practical activities are an essential part of the course and will allow learners to develop skills for further study or employment as well as imparting important knowledge that is part of the specification.

There is no direct assessment of the practical skills part of the course. However, learners will need to have completed the activities to prepare fully for the written examinations as there will be questions that assess practical skills.

Private candidates need to contact OCR approved centres to establish whether they are prepared to host them as a private candidate. The centre may charge for this facility and OCR recommends that the arrangement is made early in the course.

Further guidance for private candidates may be found on the OCR website: <http://www.ocr.org.uk>.

4d. Results and certificates

Grade Scale

GCSE (9–1) qualifications are graded on the scale: 9–1, where 9 is the highest. Learners who fail to reach the minimum standard of 1 will be Unclassified (U).

Only subjects in which grades 9 to 1 are attained will be recorded on certificates.

Results

Results are released to centres and learners for information and to allow any queries to be resolved before certificates are issued.

Centres will have access to the following results information for each learner:

- the grade for the qualification
- the raw mark for each component
- the total weighted mark for the qualification.

The following supporting information will be available:

- raw mark grade boundaries for each component
- weighted mark grade boundaries for each entry option.

Until certificates are issued, results are deemed to be provisional and may be subject to amendment.

A learner's final results will be recorded on an OCR certificate. The qualification title will be shown on the certificate as 'OCR Level 1/Level 2 GCSE (9–1) in Chemistry A (Gateway Science)'.

4e. Post-results services

A number of post-results services are available:

- **Review of results** – If you think there might be something wrong with a learner's results, centres may request a review of marking
- **Missing and incomplete results** – This service should be used if an individual subject result for a learner is missing, or the learner has been omitted entirely from the results supplied
- **Access to scripts** – Centres can request access to marked scripts.

4f. Malpractice

Any breach of the regulations for the conduct of examinations and non-exam assessment may constitute malpractice (which includes maladministration) and must be reported to

OCR as soon as it is detected. Detailed information on malpractice can be found in the JCO publication *Suspected Malpractice in Examinations and Assessments: Policies and Procedures*.

5 Appendices

5a. Grade descriptors

Grade descriptors for GCSE (9–1) single science (biology, chemistry and physics) and combined science:

1. Grades 8 and 8–8

1.1 To achieve Grades 8 and 8–8 candidates will be able to:

- demonstrate relevant and comprehensive knowledge and understanding and apply these correctly to both familiar and unfamiliar contexts using accurate scientific terminology
- use a range of mathematical skills to perform complex scientific calculations
- critically analyse qualitative and quantitative data to draw logical, well-evidenced conclusions
- critically evaluate and refine methodologies, and judge the validity of scientific conclusions.

2. Grades 5 and 5–5

2.1 To achieve Grades 5 and 5–5 candidates will be able to:

- demonstrate mostly accurate and appropriate knowledge and understanding and apply these mostly correctly to familiar and unfamiliar contexts, using mostly accurate scientific terminology
- use appropriate mathematical skills to perform multi-step calculations
- analyse qualitative and quantitative data to draw plausible conclusions supported by some evidence
- evaluate methodologies to suggest improvements to experimental methods, and comment on scientific conclusions.

3. Grades 2 and 2–2

3.1 To achieve Grades 2 and 2–2 candidates will be able to:

- demonstrate some relevant scientific knowledge and understanding using limited scientific terminology
- perform basic calculations
- draw simple conclusions from qualitative or quantitative data
- make basic comments relating to experimental method.

5b. Overlap with other qualifications

There is a small degree of overlap between the content of this specification and those for GCSE (9–1) in Combined Science A (Gateway Science), GCSE (9–1) in Biology A (Gateway Science) and GCSE (9–1) in

Physics A (Gateway Science) courses. The links between the specifications may allow for some co-teaching, particularly in the area of working scientifically.

5c. Accessibility

Reasonable adjustments and access arrangements allow learners with special educational needs, disabilities or temporary injuries to access the assessment and show what they know and can do, without changing the demands of the assessment. Applications for these should be made before the examination series. Detailed information about eligibility for access arrangements can be found in the *JCQ Access Arrangements and Reasonable Adjustments*.

The GCSE (9–1) qualification and subject criteria have been reviewed in order to identify any feature which could disadvantage learners who share a protected characteristic as defined by the Equality Act 2010. All reasonable steps have been taken to minimise any such disadvantage.

5d. Units in science

It is expected that learners will show understanding of the physical quantities and corresponding units, SI base and derived units listed below.

They will be able to use them in qualitative work and calculations. These units and their associated quantities are dimensionally independent.

SI base units		
Physical quantity	Unit	Unit
Length	metre	m
Mass	kilogram	kg
Time	second	s
Temperature	kelvin	K
Current	ampere	A
Amount of a substance	mole	mol

SI derived units		
Physical quantity	Unit(s)	Unit(s)
Area	squared metre	m ²
Volume	cubic metre; litre; cubic decimetre	m ³ ; l; dm ³
Density	kilogram per cubic metre	kg/m ³
Temperature	degree Celsius	°C
Pressure	pascal	Pa
Specific heat capacity	joule per kilogram per degree Celsius	J/kg°C
Specific latent heat	joule per kilogram	J/kg
Speed	metre per second	m/s
Force	newton	N
Gravitational field strength	newton per kilogram	N/kg
Acceleration	metre per squared second	m/s ²
Frequency	hertz	Hz
Energy	joule	J
Power	watt	W
Electric charge	coulomb	C
Electric potential difference	volt	V
Electric resistance	ohm	Ω
Magnetic flux density	tesla	T

5e. Working scientifically

The idea that science progresses through a cycle of theory, hypothesis, experimentation, observation, development and review is encompassed in this section. It covers aspects of scientific thinking and aims to develop the scientific skills and conventions, fundamental to the study of science. The section includes understanding of theories and applications of science, the practical aspects of scientific experimentation, and objective analysis and evaluation. This will enable learners to develop an understanding of the processes and methods of science and, through consideration of the different types of scientific enquiry, learners will become equipped to answer scientific questions about the world around them. Learners will also

develop and learn to apply skills in observation, modelling and problem-solving, with opportunities for these skills to be shown through links to specification content. Scientific-based claims require evaluative skills and these are also developed in this section with opportunities for contextual development highlighted. Learners should learn to evaluate through critical analysis of methodology, evidence and conclusions, both qualitatively and quantitatively.

Working scientifically is split into concepts (WS1) and practical skills (WS2). Both of these will be assessed in written examinations and WS2 may also be assessed through practical activities.

WS1: Working scientifically assessed in written examinations

Summary

The concepts and skills in this section can be assessed in written examinations. There are references to

specific apparatus and methods throughout the content of the specification. WS1 is split into four parts: WS1.1, WS1.2, WS1.3 and WS1.4.

WS1.1 Development of scientific thinking

Assessable Content		
Learning outcomes		To include
WS1.1a	understand how scientific methods and theories develop over time	new technology allowing new evidence to be collected and changing explanations as new evidence is found
WS1.1b	use models to solve problems, make predictions and to develop scientific explanations and understanding of familiar and unfamiliar facts	representational, spatial, descriptive, computational and mathematical models
WS1.1c	understand the power and limitations of science	how developments in science have led to increased understanding and improved quality of life and questions and problems that science cannot currently answer
WS1.1d	discuss ethical issues arising from developments in science	
WS1.1e	explain everyday and technological applications of science	
WS1.1f	evaluate associated personal, social, economic and environmental implications	
WS1.1g	make decisions based on the evaluation of evidence and arguments	
WS1.1h	evaluate risks both in practical science and the wider societal context	perception of risk in relation to data and consequences
WS1.1i	recognise the importance of peer review of results and of communicating results to a range of audiences	

WS1.2 Experimental skills and strategies

Assessable Content		
Learning outcomes		To include
WS1.2a	use scientific theories and explanations to develop hypotheses	
WS1.2b	plan experiments or devise procedures to make observations, produce or characterise a substance, test hypotheses, check data or explore phenomena	
WS1.2c	apply a knowledge of a range of techniques, instruments, apparatus and materials to select those appropriate to the experiment	
WS1.2d	recognise when to apply knowledge of sampling techniques to ensure any samples collected are representative	
WS1.2e	evaluate methods and suggest possible improvements and further investigations	

5

WS1.3 Analysis and evaluation

Assessable Content		
Learning outcomes		To include
	Apply the cycle of collecting, presenting and analysing data, including:	
WS1.3a	presenting observations and other data using appropriate methods	methods to include descriptive, tabular, diagrammatic and graphically
WS1.3b	translating data from one form to another	
WS1.3c	carrying out and representing mathematical and statistical analysis	statistical analysis to include arithmetic means, mode, median
WS1.3d	representing distributions of results and make estimations of uncertainty	
WS1.3e	interpreting observations and other data	data presentations to include verbal, diagrammatic, graphical, symbolic or numerical form; interpretations to include identifying patterns and trends, making inferences and drawing conclusions

Assessable Content

Learning outcomes		To include
WS1.3f	presenting reasoned explanations	relating data to hypotheses
WS1.3g	evaluating data in terms of accuracy, precision, repeatability and reproducibility	
WS1.3h	identifying potential sources of random and systematic error	
WS1.3i	communicating the scientific rationale for investigations, methods used, findings and reasoned conclusions	presentations through paper-based presentations using diagrammatic, graphical, numerical and symbolic forms

WS1.4 Scientific vocabulary, quantities, units, symbols and nomenclature

Assessable Content

Learning outcomes		To include
WS1.4a	use scientific vocabulary, terminology and definitions	
WS1.4b	recognise the importance of scientific quantities and understand how they are determined	
WS1.4c	use SI units and IUPAC chemical nomenclature unless inappropriate	base units & derived units
WS1.4d	use prefixes and powers of ten for orders of magnitude	tera, giga, mega, kilo, deci, centi, milli, micro and nano
WS1.4e	interconvert units	
WS1.4f	use an appropriate number of significant figures in calculations	

5

WS2: Working scientifically skills demonstrated

Summary

A range of practical experiences are a vital part of a scientific study at this level. A wide range of practical skills will be addressed throughout the course, skills which are required for the development of

investigative skills. Learners should be given the opportunity to practise their practical skills, which will also prepare them for the written examinations. For further details of the practical activity requirements, Topic C7.

Practical skills to be developed		
	Learning outcomes	To include
WS2a	carry out experiments	due regard to the correct manipulation of apparatus, the accuracy of measurements and health and safety considerations, and following written instructions
WS2b	make and record observations and measurements using a range of apparatus and methods	keeping appropriate records
WS2c	presenting observations using appropriate methods	methods to include descriptive, tabular, diagrammatic and graphical
WS2d	communicating the scientific rationale for investigations, methods used, findings and reasoned conclusions	presentations through paper-based and electronic reports and presentations using verbal, diagrammatic, graphical, numerical and symbolic forms

5f. Mathematical skills requirement

In order to be able to develop their skills, knowledge and understanding in GCSE (9–1) in Chemistry A (Gateway Science), learners need to have been taught, and to have acquired competence in, the appropriate areas of mathematics relevant to the subject as indicated in the table of coverage below.

The questions and tasks used to target mathematical skills will be at a level of demand that is appropriate to GCSE (9–1) in Chemistry A (Gateway Science).

In the Foundation Tier question papers, the questions that assess mathematical skills will not be of a lower demand than that which is expected of learners at Key Stage 3, as outlined in the Department of Education’s document “Mathematics programme of study: key stage 3”.

In the Higher Tier question papers, the questions that assess mathematical skills will not be lower than that of question and tasks in assessment for the

Foundation Tier in a GCSE qualification in Mathematics.

The assessment of quantitative skills would include at least 20% mathematical skills at the appropriate tier for chemistry.

These skills will be applied in the context of the relevant chemistry.

All mathematical content will be assessed within the lifetime of the specification.

This list of examples is not exhaustive and is not limited to GCSE examples. These skills could be developed in other areas of specification content as indicated in the opportunities to cover column.

The mathematical skills required for the GCSE (9–1) in Biology (B), Chemistry (C), Physics (P) and Combined Science (CS) are shown in the table on the following page.

	Mathematical skills	Subject			
M1	Arithmetic and numerical computation				
a	Recognise and use expressions in decimal form	B	C	P	CS
b	Recognise and use expressions in standard form	B	C	P	CS
c	Use ratios, fractions and percentages	B	C	P	CS
d	Make estimates of the results of simple calculations	B	C	P	CS
M2	Handling data				
a	Use an appropriate number of significant figures	B	C	P	CS
b	Find arithmetic means	B	C	P	CS
c	Construct and interpret frequency tables and diagrams, bar charts and histograms	B	C	P	CS
d	Understand the principles of sampling as applied to scientific data	B			
e	Understand simple probability	B			
f	Understand the terms mean, mode and median	B		P	CS
g	Use a scatter diagram to identify a correlation between two variables	B		P	CS
h	Make order of magnitude calculations	B	C	P	CS
M3	Algebra				
a	Understand and use the symbols: =, <, <<, >>, >, α , \sim	B	C	P	CS
b	Change the subject of an equation		C	P	CS
c	Substitute numerical values into algebraic equations using appropriate units for physical quantities		C	P	CS
d	Solve simple algebraic equations	B		P	CS
M4	Graphs				
a	Translate information between graphical and numeric form	B	C	P	CS
b	Understand that $y=mx+c$ represents a linear relationship	B	C	P	CS
c	Plot two variables from experimental or other data	B	C	P	CS
d	Determine the slope and intercept of a linear graph	B	C	P	CS
e	Draw and use the slope of a tangent to a curve as a measure of rate of change		C	P	CS
f	Understand the physical significance of area between a curve and the x-axis and measure it by counting squares as appropriate			P	CS
M5	Geometry and trigonometry				
a	Use angular measures in degrees			P	CS
b	Visualise and represent 2D and 3D forms including two dimensional representations of 3D objects		C	P	CS
c	Calculate areas of triangles and rectangles, surface areas and volumes of cubes.	B	C	P	CS

5g. Health and safety

In UK law, health and safety is primarily the responsibility of the employer. In a school or college the employer could be a local education authority, the governing body or board of trustees. Employees (teachers/lecturers, technicians etc.), have a legal duty to cooperate with their employer on health and safety matters. Various regulations, but especially the COSHH Regulations 2002 (as amended) and the Management of Health and Safety at Work Regulations 1999, require that before any activity involving a hazardous procedure or harmful microorganisms is carried out, or hazardous chemicals are used or made, the employer must carry out a risk assessment. A useful summary of the requirements for risk assessment in school or college science can be found at: <https://www.ase.org.uk>.

5

For members, the CLEAPSS® guide, *PS90, Making and recording risk assessments in school science*¹ offers appropriate advice.

Most education employers have adopted nationally available publications as the basis for their Model Risk Assessments.

Where an employer has adopted model risk assessments an individual school or college then has to review them, to see if there is a need to modify or adapt them in some way to suit the particular conditions of the establishment.

Such adaptations might include a reduced scale of working, deciding that the fume cupboard provision was inadequate or the skills of the learners were insufficient to attempt particular activities safely. The significant findings of such risk assessment should then be recorded in a “*point of use text*”, for example on schemes of work, published teachers guides, work sheets, etc. There is no specific legal requirement that detailed risk assessment forms should be completed for each practical activity, although a minority of employers may require this.

Where project work or investigations, sometimes linked to work-related activities, are included in specifications this may well lead to the use of novel procedures, chemicals or microorganisms, which are not covered by the employer’s model risk assessments. The employer should have given guidance on how to proceed in such cases. Often, for members, it will involve contacting CLEAPSS®¹.

¹ These, and other CLEAPSS® publications, are on the CLEAPSS® Science Publications website www.cleapss.org.uk. Note that CLEAPSS® publications are only available to members. For more information about CLEAPSS® go to www.cleapss.org.uk.

Summary of updates

Date	Version	Section	Title of section	Change
December 2017	2	Multiple		Changes to generic wording and OCR website links throughout the specification. No changes have been made to any assessment requirements.
April 2018	2.1	i) Front cover ii) 4d	i) Disclaimer ii) Results and certificates: Results	i) Addition of Disclaimer ii) Amend to Certification Titling
May 2018	2.2	2c and 4c	Practical Science Statement and Head of Centre Annual Declaration	Update in line with new NEA Centre Declaration form.
December 2018	3	i) 3b ii) 3c	i) Assessment Objectives (AO) ii) Command words	i) Addition of Assessment Objective elements and ii) Command words
February 2019	3.1	Topic 3C	Chemical Reactions	Definition of mole
April 2020	3.2	i) 1d ii) 4e	i) How do I find out more information? ii) Post-results services	i) Insertion of link to the new Online Support Centre ii) Enquiry about results changed to Review of results.
April 2020	3.3	2c	Content of topics C1 to C6	Wording in table updated for clarification Update to specification covers to meet digital accessibility standards
June 2023	3.4	3	Assessment of GCSE (9–1) in Chemistry A (Gateway Science)	Insertion of new section 3e. Total qualification time.
February 2024	3.5	3f and 3g 4a Checklist	Qualification availability and Language Pre-assessment	Inclusion of disclaimer regarding availability and language Update to include resilience guidance Inclusion of Teach Cambridge
