

## Physics Equations Sheet

### GCSE Physics (8463)

1	<b>pressure due to a column of liquid</b> <b>= height of column × density of liquid × gravitational field strength (g)</b>	$p = h \rho g$
2	(final velocity) <sup>2</sup> – (initial velocity) <sup>2</sup> = 2 × acceleration × distance	$v^2 - u^2 = 2 a s$
3	<b>force = <math>\frac{\text{change in momentum}}{\text{time taken}}</math></b>	$F = \frac{m \Delta v}{\Delta t}$
4	elastic potential energy = 0.5 × spring constant × (extension) <sup>2</sup>	$E_e = \frac{1}{2} k e^2$
5	change in thermal energy = mass × specific heat capacity × temperature change	$\Delta E = m c \Delta \theta$
6	period = $\frac{1}{\text{frequency}}$	$T = \frac{1}{f}$
7	magnification = $\frac{\text{image height}}{\text{object height}}$	
8	<b>force on a conductor (at right angles to a magnetic field) carrying a current</b> <b>= magnetic flux density × current × length</b>	$F = B I l$
9	thermal energy for a change of state = mass × specific latent heat	$E = m L$
10	<b><math>\frac{\text{potential difference across primary coil}}{\text{potential difference across secondary coil}} = \frac{\text{number of turns in primary coil}}{\text{number of turns in secondary coil}}</math></b>	$\frac{V_p}{V_s} = \frac{n_p}{n_s}$
11	<b>potential difference across primary coil × current in primary coil</b> <b>= potential difference across secondary coil × current in secondary coil</b>	$V_p I_p = V_s I_s$
12	For gases: pressure × volume = constant	$p V = \text{constant}$

Higher Tier only equations are in **bold**.
